

# Example Book for lecture handouts

January 16, 2013

# Contents

I	The First Chapter	7
II	The Second Chapter	11
III	The Third Chapter	15

# Introduction

This book is created with the “LaTeX Handouts Builder” Python script.  
More info: <https://github.com/jeroendoggen/latex-handouts-builder>  
The script is still a work in progress. The features are based on a similar Bash script that I have been using for several years.

## Program flow

- Run one command 'build.py'
- Several sets of LaTeX-beamer slides are build:
- pdf documents are created
- Different versions: 4/6 slides per page, handout version with printer friendly colors
- These slide handouts are merged in one 'handouts-LaTeX-book' with a title page, introduction, table of contents,...
- All these documents are compressed in a single .zip archive. (and uploaded to the course website)
